

ANIMAL SCIENCE REPORT NO. 1
NUTRIENT ANALYSES OF FEEDSTUFFS INCLUDING CARBOHYDRATES¹ (4/27/98)
WEST VIRGINIA UNIVERSITY
T.K. MILLER WEBSTER AND W.H.HOOVER

¹A note on the interpretation of the sugar and starch values:

For samples prior to 1997, the sugar column represents only simple sugars, mainly glucose and fructose, in the samples. Sucrose and fructans, by virtue of the analytical methods, appear in the "starch" fraction, along with the true starch.

Because of the continued interest in knowing the sucrose content of several by-products and the fructan content of forages, the analysis was modified in 1997. For all feeds in 1997 and after, the sugar fraction contains the sucrose, fructans, fructose, glucose and lactose extracted from the feed by stirring in water at 39°C for 1 hour. The starch fraction contains the starch plus any sugars not extracted by water in 1 hour.
